

Common Questions

Q) About how many yards are there in a load:

A) There are approximately 32 Cubic Yards in a 24-Ton Truckload. There are approximately 1.33 cubic yards in 1 ton of our material.

Q) Does your Infield Conditioner Blow away?

A) Absolutely Not!!!!

Q) What is this stuff made of?

A) ATC Infield Conditioner is made of a rare scoria (lava) that has been screened and blended in two different gradations to suit your Baseball/Softball needs. We are a sole source provider so you will not find any material out there that is exactly like our material.

Q) How many Tons do you need on a standard size baseball field?

A) A standard size baseball field uses about 17 to 18 tons of infield conditioner for a good initial application.

Q) How many tons do you need on a standard softball field?

A) A standard sized softball field uses about 18 to 20 tons of infield conditioner for a good initial application.

Q) If you only need 17 to 20 Tons of Material for total coverage why do you sell in a 24-ton load?

A) We always recommend that you try to keep a maintenance pile of our product and since we deliver in bulk more than likely you will have some leftover ATC Infield Conditioner. We suggest you keep any unused portion in a pile to apply as a quick dry for puddles or to raise any low spots or blank areas on your fields.
